

Introducing ERICA

from SUPRA UK LTD

External Release Internal Chain Access

FACT. The door chain is a great secondary door security device, providing peace of mind for both young and old alike.

QUESTION ?. What happens if, for whatever reason, the person inside the property cannot get to the door to release the chain? Even when you have a key to the main lock, the security chain is acting as a steel barrier, preventing you access in the case of an emergency. What do you do? – kick the door down – split the door frame – damage the whole door – cut through the chain.

ANSWER ? - FIT ERICA. Standing for External Release Internal Chain Access, this unique product has been specifically designed and developed to provide the effective solution to this situation, without compromising the original security that the door chain provides.

ERICA. is a completely new style of door chain. The product can be fitted in exactly the same way and in the same position on the inside of the door as with a conventional chain. When the chain bars entry, access from outside can be simply achieved via a standard rim cylinder, using an individual key.
