- Fitted with high security double bitted keylock (VDS Class 1).
- High Security Electronic locking available as an optional extra on all models.
- Ready prepared for floor fixing (bolts supplied).

# Specification Sheet

## Phoenix Castille Range

### Body

The inner and outer bodies are constructed from high grade steel electrically welded together to form one solid unit 60mm thick. The space between the inner and outer body contains advanced anti-penetration and fire resisting materials.

### Door

The door is constructed with double steel walls containing a unique Anti Penetration and Fire Resisting material in total, forming a 100mm barrier of defensive strength and fire resistance.

### Boltwork

All sizes have 3 way moving espagnolette boltwork with 30mm bolts securing into the top and bottom door frame. The leading edge of the door has 2 x 30mm bolts securing into the frame. In addition the two hinge dog bolts at the rear give added strength and provide a clean cut, modern appearance disguising it's strength.

### Locking

The standard locking is a double bitted VDS Class 1 banking quality lock with keys in duplicate. The entire locking area is covered by hardened manganese steel anti drill plates and a "live" anti explosive relocking device, which is permanently on guard to protect against even the most determined attack.

### Finish

All safes are finished in RAL 9002 durable white textured finish.

Product Code	Information
