## Phoenix Datacare Range

IBM, OLIVETTI, HEWLETT PACKARD, TOSHIBA, ZENITH, APRICOT, APPLE - whatever the make, your expensively purchased computer is useless if your data has been corrupted by heat, dust, humidity, malicious or accidental damage.

Magnetic media is sensitive, easily damaged and susceptible to low levels of heat or humidity. The manufacturers recommend maximum exposure to heat must not exceed 52°C or humidity level greater than 85%. It makes sense, therefore, to protect them. Potential hazards are many. A cup of boiling tea or coffee, for example, at 100°C will seriously damage your media - probably destroy it!

Loss or damage by fire statistics suggest that 56% of all companies affected by it go out of business, because of vital lost trading information. This is an extreme - BUT IT COULD HAPPEN TO YOU. So what is the value of the data lost? How many hours, days, weeks, months did it take to compile? How many minutes will it take to lose? Phoenix Datacare is the answer. A secure, modern, attractive and highly tested cabinet next to the computer or work station will ensure your files are effectively protected. Phoenix Datacare safes have been extensively tested in both the UK and Sweden. The Swedish data protection test NT FIRE 017-120 Diskette requires a temperature of 1050°C to be maintained over 2 hours. A model 2003 in this test restricted internal temperatures to only 39°C, thereby exceeding the minimum test required by 25%. All Datacare 2000 series are built to this exacting standard.

Product Code	Information
2001	Internal 245mm x 155mm x 197mm External 412mm x 350mm x 432mm Door Swing: 305mm Weight: 43Kg Capacity: 7 Litres
2002	Internal 380mm x 235mm x 187mm External 685mm x 470mm x 470mm Door Swing: 541mm/30mm Weight: 95Kg Capacity: 17 Litres
2003	Internal 495mm x 400mm x 405mm External 855mm x 690mm x 720mm Door Swing: 609mm/30mm Weight: 242Kg Capacity: 80 Litres
